## CONTENT

### Geotechnology

**Baryah A.A., Evseev A.V.** Closure of potash and salt mines: Review and analysis of the problem.................................................................5

**Buktukov N.S., Gumennikov E.S., Mashataeva G.A.** In-situ gasification of steeply dipping coal beds with production hole making by supersonic hydraulic jets .................. 30

**Rylnikova M.V., Mitishova N.A.** Research technique for explosion hazard of low-grade sulphide ore in underground mines...............................................................41

### Geomechanics, Rock failure

**Tsirel S.V., Pavlovich A.A., Melnikov N.Ya.** Factors of deformation mechanisms in pit-wall rock mass with in-depth steeply dipping bedding........................................52

**Shiryaev S.N., Cherepov A.A., Petrova O.A.** Analysis of coal seam permeability around the edges versus stress–strain state of rock mass .......................................................... 62

**Oparin V.N., Adushkin V.V., Yushkin V.F., Potapov V.P.** Influence of natural climate and mining-induced impact on mechanical erosion and seismic noise in the areas of open pit coal mines in Kuzbass........................................................... 72

### Enrichment of minerals

**Tagunov E.Ya., Izmalkov V.A., Puchkov V.A., Diev D.N.** Features of constructing polygradient matrices for high-gradient separators with superconducting magnetic systems ........................................................................ 102

**Kioresku A.V.** Effect of microwave radiation exposure time on chemolithotrophs........... 115

**Korchevskii A.N., Zviagintseva N.A.** Experimental study of briquetting technology for iron-bearing metallurgical waste treatment ....................................................................... 122

### Mine aerogasdynamics, Mining thermophysics

**Malashkina V.A.** Efficiency boosting feature of intensification of coal mine in degasification...................................................................................... 131

### Geoecology

### Mining industrial geology, Mining geophysics

**Kolesnikov I.Yu., Tatarinov V.N.** Stability of geological medium under bending loads and concentrated energy impulses................................................................................ 149

**Nikolenko P.V.** Methodical aspects of determination of thermobaric effects on ultrasonic vibration velocity in rocks ......................................................................................... 160

### Markshading, Geometry of subsoil

**Burakov A.M., Kasanov I.S.** Appraisal procedure for probable resources of mining-generated placers in Yakutia....................................................................................... 168

### Mining machinery

**Makarov N.V., Makarov V.N., Lifanov A.V., Tauger V.M., Ugol’nikov A.V.** Modification of vortex theory for engineering aerodynamically stable circular gratings for turbo machines.......................................................................................... 184
Pelipenko N.A., Ignatenko I.M. Vibropercussion polyindenter drilling assembly ..................... 195
Slobodyanik T.M., Balakhnina E.E. Dynamics of elementary differential composed of
elastic bodies.............................................................................................................................. 204

Safety in emergency
Lisovskiy V.V., Kravchuk I.L., Denisov S.E. Industrial conflict as a cornerstone of produc-
tion risk management ........................................................................................................... 211

Labor protection in mining
Liskova M.Yu., Vishnevskaya N.L., Plakhova L.V. Effect of microclimate on personnel
in deep-level excavations of potash mines........................................................................ 219

Special editions GIAB
Mikhailov A.V., Kazakov Yu.A. The fleet analysis at open-pit mining of peat ................. 29
Team of authors Safety and ecology of mining.................................................................. 51
Team of authors Industrial safety of enterprises of mineral resources in the XXI cen-
tury. Vol. 1, Vol. 2 ................................................................................................................ 71
Team of authors Safety and risk management in mining and metallurgical industry ...... 114
Team of authors Substantiation of the parameters of underground and physico-
chemical geotechnology in the development of coal deposits ........................................... 121
Varigin S.O., Agafonov V.V. Scientific and methodological support for the formation
of design, technological and organizational mechanisms for the effective func-
tioning of coal mines ............................................................................................................. 159
Vagapova E.A., Khudyakova I.N., Ivanov S.L. The reason for choice of equipment for
primary dehydration of raw peat during its hydraulic mining from undrained peat
deposit ..................................................................................................................................... 203
Tsirel S.V., Pavlovich A.A., Mel’nikov N.Ya., Idiyatullin M.M. Joint use of physical
and numerical modeling in assessing the stability of quarry sides with complex
structure ...................................................................................................................................... 229
Gabov V.V., Elikhin A.S., Zadkov D.A., Golikov N.S. Justification of the structure and
parameters of the unit for coal mining ................................................................................. 230
