CONTENTS

Geotechnology (underground, open and construction)

Rudenko V.V. Concept of development in the science of Qualimetry of subsoil .............................................. 5
Algebraistova N.K.,Perfilova O.Yu., Kolotushkin D.M., Komarova E.S. Material constitution and recovery of impact diamonds ................................................................. 13

Burmistrov K.V., Ovsyannikov M.P. Validation of open pit stage design in the transition periods of mining at steeply dipping mineral deposits.......................................................... 20

Lygach A.V. State-of-the-art and prospects of using Egorievsk nodular phosphorite in the Voskresensky district, Moscow Region ................................................................. 29

Nikolashin S.Yu., Nikolashin Yu.M., Kebal Ya.V. Hydro- and geomechanical conditions of internal dumping in a flooded open pit mine ................................................................. 38

Sencus Val.V., Malafeev D.V., Abramkin N.I. Optimization of open pit coal mine depth limit in hybrid mining method ................................................................................................. 45

Sencus Val.V., Abramkin N.I., Ermakov N.A. Accessing pitwall reserves in underground mining and features of ventilation .......................................................................................... 55

Stepanenko V.P. Resource-saving promotion at isolated generating plants in the Republic of Sakha (Yakutia) ............................................................................................................ 62

Shpakov P.S., Yunakov Yu.L. Dump stability at the Eldorado deposit ................................................................. 69

Rock failure

Anisimov V.N. Destruction of complex-structure ferruginous quartzite by explosion-type magnetic impact, considering geological and geophysical characteristics and efficient subsoil use ................................................................................................................................. 80

Mining industrial geology

Guman O.M., Makarov A.B., Antonova I.A., Zaharov A.V. Transformation of geological environment in copper pyrite mining in the Urals ................................................................. 98

Mining geophysics

Gaysin R.M., Nabatov V.V. Detection of anomalous zones by the continuation method in underground electric exploration .................................................................................................. 107

Mining machinery and equipment

Lukashuk O.A., Letnev K.Yu. Determination of energy consumption in soil excavation .......................... 113
Sheshko O.E. Comparative assessment of environmental impact of dump trucks and diesel trolley cars in open pit mining .......................................................................................... 119

Enrichment of minerals

Alborov I.D., Gegueva M.M., Kasumov Yu.N., Kozyrev E.N., Sozaev V.A. Bio-geotechnology for gold-bearing ore ................................................................. 126

Baykelova G.Sh., Kabaev O.D., Abayladaev S.E. Material constitution of old tailings at Aktyuz Processing Plant ................................................................................................. 134

Evdokimov S.I., Gerasimenko T.E. Properties of wetting liquid films in flotation processes ............... 142

Osipova N.V. Synthesis of asymptotic observer for magnetic separator control in iron ore processing .......................................................................................................................... 153

Povetkin V.V., Kerimzhanova M.F., Orlova Y.P., Bukayeva A.Z. Improvement of equipment for transport of slurry in mineral processing production ......................................................... 161
Production organization and management in mining

*Tarasov P.I., Zyryanov I.V., Khazin M.L.* Transport passage through West Yakutia.................. 170

Fire and industrial safety in mining

*Golynskaya F.A.* Problem of spontaneous fires and self-ignition prediction in the Moscow Coal Basin................................................................. 185

*Ermakov A.Yu., Kachurin N.M.* Methane release in thick gently dipping coal bed mining................................................................................................. 193

*Kachurin N.M., Ermakov A.Yu., Ermakov E.A.* Prediction of methane hazard of geo-technology for underground mining of gently dipping coal seams with methane recovery.................................................................................. 207

*Ushakov V.K.* Cost estimate of mine ventilation system design and operation towards enhanced labor safety................................................................. 214

Computer science, Automated control systems

*Goncharenko A.N.* Modern trends and application models in E-learning and remote training in the framework of higher education programs .................................................. 222

Special editions GIAB

*Team of authors* Strategy, tactics and practice of innovative development of coal mining production association............................................................... 61

*Team of authors* Open mining in the twenty-first century: results, challenges and development prospects (Proceedings of the III International scientific and practical conference), vol. 1, 2 .................................................................................. 68

*Kubrin S.S., Zakorshmeniy I.M.* Consideration of the factors influencing the choice of lava operation regimes in the development of coal seams with a high gas content................. 97

*Team of authors* Development of mining complex Russian Far East.............................................. 184

*Sidorenko A.A., Sidorenko S.A.* Justification of ventilation schemes of longwall panel at coal seams mining in difficult mining-and-geological conditions ............................................ 230

The deposited manuscripts

*Vasyuchkov Yu.F., Skopintseva O.V., Pavlenko M.V.* Theoretical investigations of vibra- tional effects on the capillary rolling of the coal massive........................................................ 44
